

**FIRST  
NON-FLAMMABLE  
LED SCREEN**

LED-SCREEN

## NON-FLAMMABLE

The world's first "Non-Flammable LED Screen" not only captivate visually but also assures fire safety for indoor and outdoor installations. We offer LED screens for indoor use down to 1.5mm and for outdoor use down to 5.7mm Pitch. Versatile and economically efficient with innovative power-saving features, they also serve as effective fire prevention measures. Our screens comply to the highest safety standards according to European law.

Explore the future of visual technology, security, and quality all in one screen.

### Advantages

#### NON-FLAMMABLE

According to EN13501-1 our screens are certified to European standards A2-s1-d0 for non-combustibility.

#### SAFETY FOR PEOPLE AND VENUES

Elevate security to new heights ensuring non-flammability, minimal smoke, and no burning droplets.

#### FOR USE IN SENSITIVE AREAS

These attributes make it particularly suitable for environments where safety and fire prevention are paramount.

#### USE AS CONSTRUCTION MATERIAL

The use of our "Non-Flammable LED Screens" as a building material significantly simplifies utilization.

#### ENERGY EFFICIENT

Our "Non-Flammable LED Screens" bring you cost-efficiency through innovative power-saving features.

#### MADE IN GERMANY

Trust in quality craftsmanship; our "Non-Flammable LED Screens" are proudly manufactured in Germany.

NORM EN13501-1

## STANDARD A2-S1-D0

The classification A2-s1-d0 pertains to the reaction of construction products in the event of a fire according to the European standard **EN13501-1**.

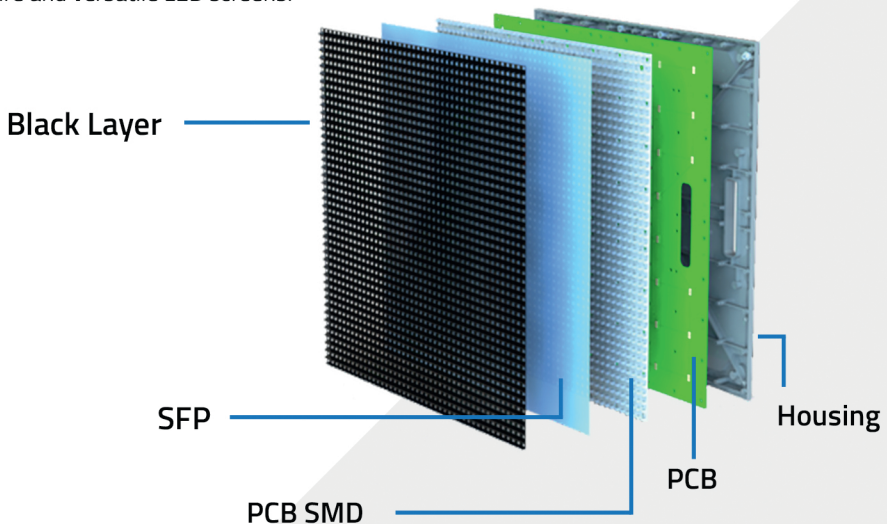

**A2** The material is non-combustible and does not contribute.

**S1** The smoke emission during a fire is minimal.

**D0** The material does not produce burning or glowing droplets.

### The technology behind the “Non-Flammable LED Screen”:

The Screen Fire Protection Technology is an advanced, patented, multi-layered solution optimizing the fire safety of LED screens. It allows secure usage in sensitive environments, featuring three protective layers, seamless integration without visual compromise, optional internal fire protection, and suitability for both indoor and outdoor applications – a groundbreaking innovation for secure and versatile LED screens.
